

Enterprise Information Solutions

Enterprise Information Solutions has a wide scope of software solutions including SCADA Software, SCADA Historian (Data Historian for short), edge technologies like software device drivers, advanced applications, Control Systems, EAM gateways and the list goes on. At the core of Industrial Automation, is SCADA and Process Data Historian. These mature product types have become the main staple for managing critical infrastructure associated with intelligent assets. Evidence of how stable some of these systems are, is measured in “up time”, and for some systems is in the order of 99.999% available.
